

Poline Lottin

Staff Software Engineer

Santa Catarina, Brazil • +55 48 98809-3056 • lotinp@gmail.com • linkedin.com/in/polinelottin • github.com/polinelottin

PROFESSIONAL SUMMARY

Staff Software Engineer with 15+ years of experience spanning fullstack development and agile coaching / process transformation. Deep frontend expertise (React, React Native, GraphQL) complemented by backend work in Node.js, Golang, and Ruby on Rails, across environments ranging from large-scale platforms (Mercado Libre, Intuit) to early-stage startups. Known for shipping high-quality, scalable software and for bridging deep technical execution with team and delivery effectiveness. Seeking to lead cross-functional engineering efforts that deliver fast, delightful user experiences.

CORE SKILLS

Languages & Frameworks: JavaScript, React.js, React Native, Node.js, GraphQL, REST APIs, Golang, Ruby on Rails, Angular, Java, SQL, CSS/SCSS

Practices & Methods: Agile/Scrum, Kanban, Extreme Programming (XP), TDD, react-testing-library, Clean Code, Management 3.0, Technical Coaching & Facilitation

Certifications: Kanban (LKU) – KMP Foundation I

Languages: English (Full Professional), Spanish (Full Professional), Portuguese (Native)

EXPERIENCE

Intuit | Remote – Brazil

Staff Software Engineer | Aug 2026 – Present

- Own the extraction of shared UI functionality from a core internal application into two standalone libraries — component contracts, backward-compatible shims for the legacy API, alignment with Intuit's Design System, and a clean i18n boundary that keeps the library translation-agnostic.
- Lead the decomposition of a legacy frontend application into modular plugins (starting with the time-off feature), including a React Router v6 compatibility adapter that preserves legacy routing APIs so migrated code keeps compiling.
- Define the technical approach for major cross-cutting migrations (i18n/NLS, benefits cleanup, React 18 readiness), breaking them into epics/tasks and producing the playbooks the team follows.
- Own release management and on-call for a core Ruby on Rails service (sign-off, hotfixes, incident response across PagerDuty, Splunk, Wavefront, and ServiceNow), and drive monorepo-wide quality improvements — test coverage, dead-code removal, and production-error triage.

Software Engineer | May 2025 – Aug 2026

- Led a React 18 migration and design-system rollout spanning i18n, forms, and the Benefits product area — including standing up a new shared library — work recognized as operating above typical Senior-level scope.
- Built an AI-assisted i18n tooling skill adopted and replicated across ~28 PRs by other engineers; authored a design-system playbook, Forms Impact Report, and Testing Checklist that became team-wide references.
- Maintained zero regressions across 12 critical forms while coordinating risk communication across three partner scrum teams on tight timelines.
- Served as the pod's default first-stop reviewer (106 PR reviews) and provided ongoing technical mentorship.
- Promoted to Staff Software Engineer after ~1 year, following a performance review rating this work as exceeding expectations on scope, technical craft, and execution.

GoCo.io, Inc. | Houston, TX

Technical Lead, Frontend Engineering | Oct 2021 – May 2025

- Owned and evolved GoCo's Design System and UI component library, serving as the technical reference for frontend architecture, reusable components, and UI consistency across product teams.
- Led cross-functional frontend architecture initiatives across multiple engineering pods, translating product and design requirements into scalable UI patterns and driving adoption of shared Design System components.
- Led a company-wide SCSS deprecation initiative spanning 151+ files, coordinating multiple product pods to replace legacy styles with Design System components.

- Drove the evolution of the Design System toward Intuit/QBO standards (migration strategy, component prioritization, backwards-compatible APIs) — the product was later acquired by QuickBooks (Intuit) in 2025, with this work cited as one of the differentiators behind the acquisition and the path that led directly to joining Intuit.

Mercado Libre | Florianópolis Area, Brazil

Frontend Software Engineer | Sep 2019 – Oct 2021

- Developed micro-frontends for Mercado Libre's regional distribution system (JavaScript, React, Node.js), partnering cross-functionally on logistics strategy to maximize package-processing efficiency.
- Collaborated with the team on solution design, code review, and API documentation; wrote and executed test scenarios; owned deployment and release to production.

Go Good | Florianópolis Area, Brazil

Fullstack Software Engineer | Jun 2018 – Jul 2019

- Built a habit-tracking mobile app end-to-end on a lean team at an early-stage startup, leading UX discovery focused on highly engaged user experiences.
- Developed the solution using React Native (mobile) and Ruby on Rails (backend); planned releases and owned app-store deployment, publication, bug fixes, and customer support.

Knowledge21

Agile Coach | Sep 2017 – Jan 2018

- Worked as a digital-transformation consultant for some of the largest industrial companies and banks in Brazil, delivering culture/process/technology assessments and agile-methodology training.

Softplan Planejamento e Sistemas | Florianópolis, Brazil

Culture Scout | Apr 2017 – Aug 2017

- Led strategic-planning alignment and cultural-transformation initiatives company-wide using Management 3.0 and coaching practices.

Quality & Process Analyst | Jul 2015 – Apr 2017

- Led process-improvement initiatives to meet customer SLAs and owned ISO 9001 process-quality control, training teams on processes and tools.
- Reduced analysis bureaucracy, sparked a user-story and automated-testing culture, and configured IBM Rational Team Concert across an entire business unit.

Business Analyst | Mar 2013 – Jul 2015

- Gathered requirements for construction-industry clients, prepared cost/scope-based budgets and UML documentation, and served as the team's primary client point of contact.

Software Developer | Aug 2009 – Mar 2013

- Developed a large ERP monolith for the construction industry in Java, gaining early experience with automated testing, TDD, and clean-code practices.

EDUCATION

Faculdade de Tecnologia Rocketseat

Postgraduate Program, Fullstack with AI — In Progress

Universidade Federal de Santa Catarina

Bachelor's Degree, Information Technology — 2007–2011
